

EHR Modernization Readiness Checklist

Use this quick diagnostic to evaluate readiness.

Discovery

- ☑ Do we have a clear map of legacy dependencies and business logic?
- ☑ Can we identify modernization targets with measurable ROI?

Execution

- ☑ Are we able to deploy cloud-native modules alongside legacy systems?
- ☑ Do we integrate through standards-based APIs rather than custom point connections?

Financial alignment

- ☑ Can modernization be funded incrementally instead of through a single capital project?
- ☑ Are outcomes measured in operational savings or revenue improvement?

Risk management

- ☑ Will clinical workflows remain stable during each release?
- ☑ Can we validate improvements before expanding scope?

**If most answers are unclear,
discovery—not replacement—is the *real first step*.**

Explore how [Dualboot helps healthcare organizations modernize legacy systems](#) through phased delivery, AI-assisted code analysis, and cloud-native module development aligned with measurable ROI.
